

How to View Line Numbers in the Audit Workbench Source Code Panel

This page has been made public for vendors

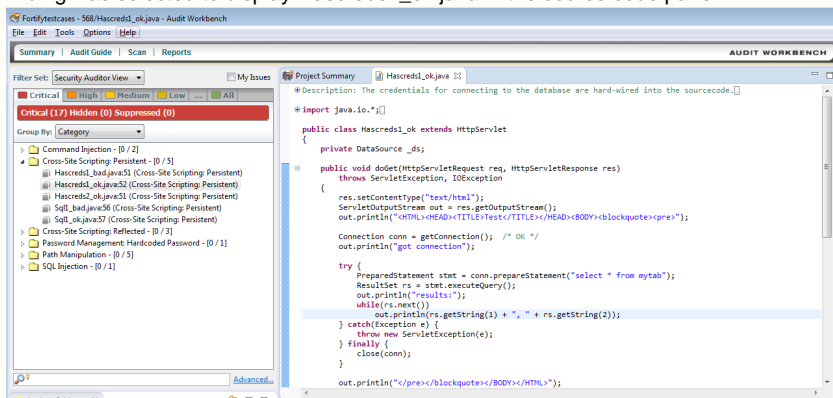

Question

How can I view line numbers in the source code panel of Audit Workbench?

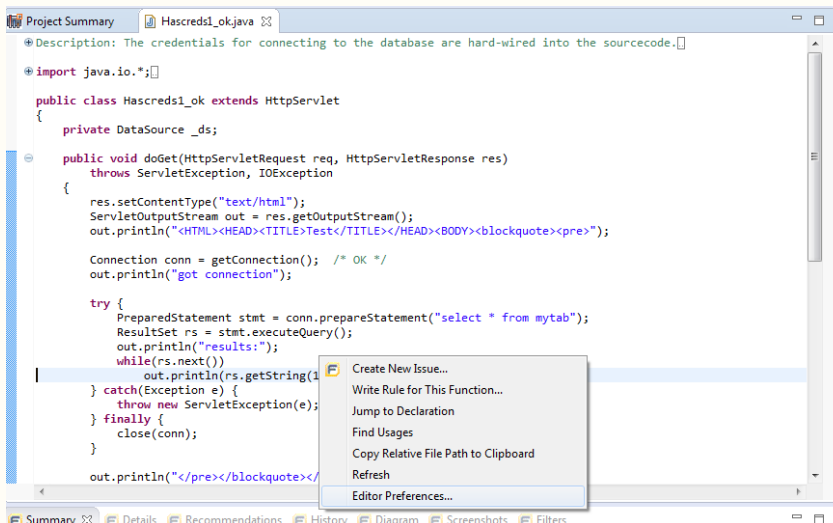

Answer

Audit Workbench does not by default display line numbers in the source code panel. To enable viewing line numbers:

Display a source code file in the source code panel by expanding a finding category in the issues panel, and then selecting a finding as shown below. The Cross_Site Scripting: Persistent category was expanded and then the Hascreds1_ok.java:52 finding was selected to display Hascreds1_ok.java in the source code panel.

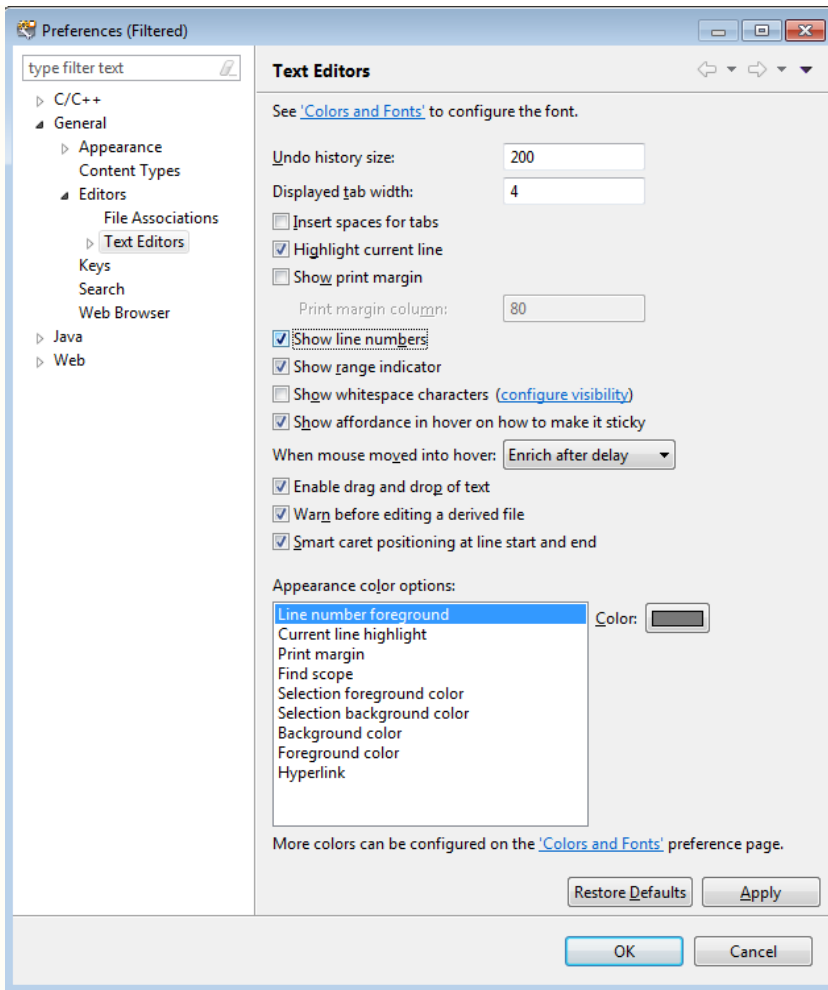

Right click in the source code panel to display menu options for the source code panel as shown below:

Select the Editor Preferences option to display the Preferences menu, shown below:

HPE Fortify Version	4.40 and later
Programming Language	<input checked="" type="checkbox"/> C/C++ <input checked="" type="checkbox"/> .NET <input checked="" type="checkbox"/> Java <input checked="" type="checkbox"/> Objective-C <input checked="" type="checkbox"/> Other
Fortify Audit Workbench	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Fortify IDE Plugin	<input type="checkbox"/> Yes <input type="checkbox"/> No
Other Fortify Component	<input type="checkbox"/> Yes <input type="checkbox"/> No

Request code review tools, validations, and support [HERE](#).

Select the "Show line numbers" checkbox in the Preferences menu and then select OK. Note that other options are available to configure how you'd like the source code panel to appear.

Line numbers will now appear in the source code panel:

```
Project Summary | Hascredsl_ok.java
35 private DataSource _ds;
36
37 public void doGet(HttpServletRequest req, HttpServletResponse res)
38     throws ServletException, IOException
39 {
40     res.setContentType("text/html");
41     ServletOutputStream out = res.getOutputStream();
42     out.println("<HTML><HEAD><TITLE>Test</TITLE></HEAD><BODY><blockquote><pre>");
43
44     Connection conn = getConnection(); /* OK */
45     out.println("got connection");
46
47     try {
48         PreparedStatement stmt = conn.prepareStatement("select * from mytab");
49         ResultSet rs = stmt.executeQuery();
50         out.println("results:");
51         while(rs.next())
52             out.println(rs.getString(1) + ", " + rs.getString(2));
53     } catch(Exception e) {
54         throw new ServletException(e);
55     } finally {
56         close(conn);
57     }
58
59     out.println("</pre></blockquote></BODY></HTML>");
60     out.close();
61 }
62
63 public void close(Connection conn)
64     throws ServletException
65 {
66 }
```
